Filed: November 30, 2001

Amend the claims as follows:

- (currently amended) A method for the treatment of arthritis comprising 1. administering to a subject suffering from arthritis a composition comprising a function blocking antibody or a fragment of said antibody, wherein said antibody or fragment of said antibody is capable of binding an epitope of VLA-1, and wherein the epitope consists of the amino acids Val-Gln-Arg-Gly-Gly-Arg (SEQ ID NO:8), or equivalents thereof and wherein the function blocking antibody or a fragment thereof is administered to the subject in a dosage of between about 10 mg to about 250 mg administered over a dosing period of between about one to about seven days to provide a decrease in arthritic score of about 65% or greater when compared to a control antibody treated subject.
- 2. (previously presented) A method according to claim 1 wherein the decrease in arthritic score is about 79% or greater.
- (previously presented) A method according to claim 1 wherein the decrease in 3. arthritic score is about 85% or greater.
- (previously presented) A method according to claim 1 wherein the decrease in 4. arthritic score is about 90% or greater.
- (previously presented) A method according to claim 1, wherein the antibody is 5. monoclonal.
- (previously presented) A method according to claim 1, wherein the subject is a 6. human.
- (previously presented) A method according to claim 1, wherein the subject suffers 7. from rheumatoid arthritis.
